

Figure S1. Percent agreement on cell phone behaviors at the one-week post-test in the control (comparison) (n = 60) and intervention (n = 155) groups.

Items 1–7:

1. I am concerned that my cell phone use has negative effects on my health
2. I am concerned that my cell phone use has negative effects on the environment
3. I should change some of my behaviors when it comes to my cell phone use
4. I plan to keep my cell phone away from my body more often
5. I plan to use a hands-free device for calls when I can
6. I am *not* concerned at all about my cell phone use and behaviors^R
7. I am *not* going to change the way I use my cell phone at all^R

Items were rated 1= strongly agree, 2 = agree, 3 = neutral, 4 = disagree, and 5 = strongly disagree, except items 6 and 7 which were reverse coded.

^A $P < .10$

^B $P < .05$

^C $P < .005$
